A large, stylized globe graphic with a red-to-teal gradient, showing the continents of North and South America. The globe is positioned in the center-right of the page.

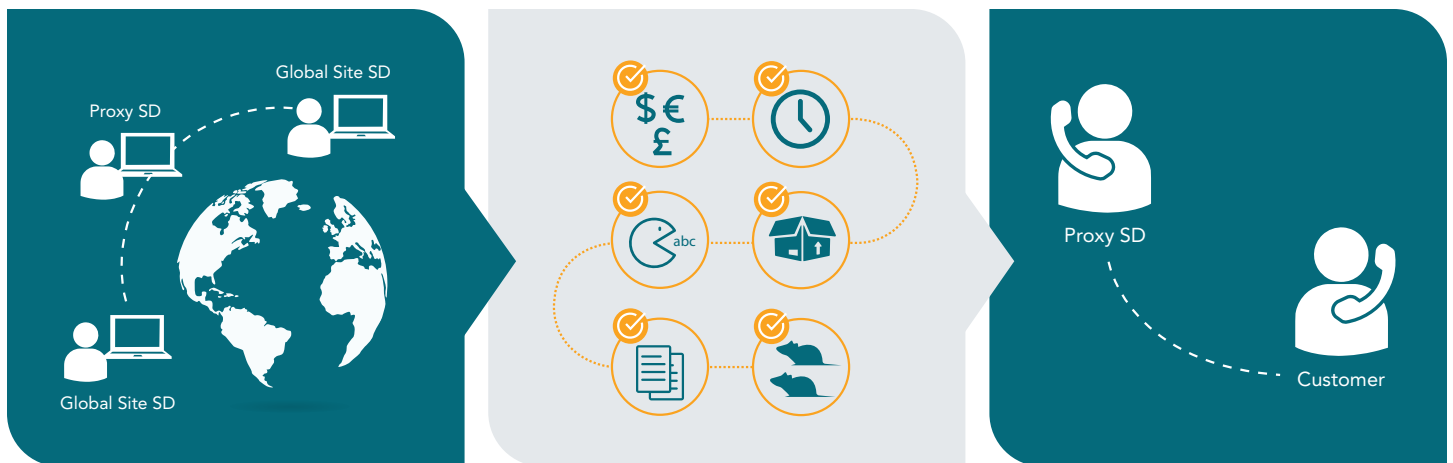

Proxy Study Director System

Simplify global contract research with a local point of contact

Whether you are running multiple studies across our global sites, or using models established at a non-local site, our proxy Study Directors act as your local point person to coordinate all internal communications.

If you are based in Europe or the US, our Proxy Study Director System enables you to:

- Streamline communication via a Study Director in or close to your time zone
- Use models at global sites, and run mouse clinical trials using models across multiple sites, with only one local point of contact
- Efficiently ship test compounds to study sites without complex paperwork
- Circumvent funding restrictions by contracting and invoicing in local currency at a local company
- Leverage local knowledge and common understanding to comply with local rules and regulations
- Utilize global sites to meet tight timelines even when your local site is at operational capacity
