

PrimePanel™

Screen your compounds on primary cancer cells

A JSR Life Sciences Company

QUICKFACT

V1.0

PrimePanel are isolated primary cells from patient-derived tumor tissues for *in vitro* drug discovery screening.

Compared with traditional cancer cell lines which can drift significantly from the original patient disease, primary cancer cells are both highly relevant to patient disease and are convenient to use in a high throughput screening format.

- Each primary cell isolate comes from a genome-defined **HuPrime**® model
- Link *in vitro* to *in vivo* to clinical efficacy
- Discover predictive biomarkers for drug response

- Curated, online, searchable database (**HuBase**™) of:
 - Phenotypic and genotypic data
 - Patient information
 - Growth curves
 - Standard of care treatment data

Comparison of the EGFR inhibitor response by 3 NSCLC PrimePanel cell lines *in vitro* and their corresponding parental PDX models *in vivo*
